

1. Confirm if the new classroom proposed would result in an increase in the number of children that could attend the nursery and what impact this might have in respect of additional traffic movements at the site.

The number of children is proposed to increase by 16no (3 - 5-year-olds) and this is unlikely to lead to material increase in movements to and from site. The proposals do not include any loss of parking or propose a restriction on current drop off arrangements. Children are dropped off and collected over different times during the day (predominately at the start and end of the nursery day) where vehicles are parked for only a short period of time. As set out in the covering letter, the existing parking area will continue to be used for staff, visitor parking and parents to drop children off. Parents will also continue to access the site on foot, which is no different to the current use of the site.

If you require any further information at this stage please let me know.

Kind regards,

Carla Scothon

Administrative Assistant
